

SARP ÇERÇİ

Computer Engineer | Full-Stack & AI-Focused Software Developer

İstanbul, Türkiye | +90 531 927 84 54 | sarpcer02@hotmail.com

LinkedIn: linkedin.com/in/sarp-çerçi-a65362234 | Portfolio: sarp6.github.io

PROFESSIONAL SUMMARY

Computer Engineering graduate with hands-on experience in backend development (C#, MS SQL) and full-stack web development (Next.js, React, TypeScript). Builds and operates production AI applications end to end: LLM API integration (OpenAI), Retrieval-Augmented Generation (RAG), embeddings and semantic caching. Skilled in OOP, SOLID principles, design patterns, and unit testing; experienced in Agile/Scrum environments.

WORK EXPERIENCE

Software Development Intern — Sendeo

İstanbul, Türkiye | June 2024 – June 2025

- Developed and maintained backend features for company projects using C# and MS SQL.
- Refactored an internal project to comply with SOLID principles, improving maintainability.
- Implemented common design patterns (Repository, Factory, Singleton) in production code.
- Wrote unit tests to increase code coverage and reduce regression bugs.
- Diagnosed and resolved database bugs, improving data integrity and query reliability.
- Contributed to Scrum ceremonies including sprint planning, daily stand-ups, and retrospectives.

PROJECTS

WorkmateAI — AI Business Assistant SaaS

Next.js 16, TypeScript, Tailwind CSS, Supabase (PostgreSQL), OpenAI API, Vercel

- Designed and built a production SaaS that automates 8 business workflows for small businesses — proposal writing, social media content, complaint responses, price analysis, campaign planning, job postings, review analysis, and contract drafting — powered by OpenAI GPT-4o-mini.
- Implemented subscription and quota management, admin-managed user provisioning, document parsing (PDF, DOCX, XLSX) that feeds company context into AI prompts, scheduled cron jobs, and automated weekly email reports.

WhatsApp AI Customer Support Bot

Node.js, Meta WhatsApp Cloud API, OpenAI API, RAG, Supabase, Railway

- Developed a production chatbot that answers customer questions over WhatsApp using Retrieval-Augmented Generation (RAG) over a product knowledge base.
- Reduced LLM API costs with embedding-based semantic caching, and built message buffering, human-handoff fallback with email alerts, and a Next.js admin panel.

Real Estate Management System (Freelance Client Project)

Next.js, TypeScript, Supabase, Vercel

- Took over, maintain, and extend a management panel actively used by a real estate agency: listing portfolio, sales and rental tracking, consultant dashboards, and row-level security on PostgreSQL.

Oltacı — Online Fishing Game

React, TypeScript, Vite, Tailwind CSS, Firebase (Auth + Firestore)

- Built a complete web game featuring a casting simulation engine, rarity/equipment/bait systems, a timing-based minigame, daily reward streaks, and a global leaderboard with cloud save.

HomeChores — Smart Task & Household Management Platform

Next.js, React, Responsive UI — deployed live

- Developed and deployed a household task and responsibility management platform with user authentication, an interactive task dashboard, smart routing (landing page → authenticated dashboard), and a reusable, scalable component architecture.

ClosestFood — Restaurant Discovery Application

Next.js, React, REST API backend, external location services

- Built a full-stack web app for finding nearby restaurants: location-based search with smart address autocomplete, responsive card-based results, and dynamic search powered by external location APIs.

VibeTrail — Social Media Application (Team Project)

Flutter, Firebase

- Co-developed a social media platform where users create, share, and interact with content in real time, featuring Firebase-backed real-time synchronization and a responsive UI, architected for future expansion (recommendation systems, notifications, AI-driven content analysis).

Tabu — Word Guessing Game (Team Project)

Flutter

- Co-developed a digital implementation of the classic Taboo game with dynamic gameplay sessions and a content architecture designed to scale to large word datasets.

Personal Portfolio Website — sarp6.github.io

React 19, Three.js (React Three Fiber), Framer Motion, GitHub Pages

- Interactive 3D portfolio with a procedural particle scene, bilingual (TR/EN) content architecture, and automated GitHub Pages deployment.

EDUCATION

B.Sc. Computer Engineering (100% English) — Beykent University, İstanbul

2021 – 2025 | GPA: 3.06 / 4.00

Atayurt Science High School — Eskişehir

2016 – 2020 | Grade: 98.89 / 100

SKILLS

Programming Languages: C#, TypeScript, JavaScript, Python, Java, C++

AI & LLM Development: OpenAI API (GPT-4o), Retrieval-Augmented Generation (RAG), Embeddings, Semantic Caching, Prompt Engineering, AI-Assisted Development (Claude Code)

Web & Backend: Next.js, React, Node.js, .NET, Tailwind CSS, REST APIs, Webhooks

Mobile: Flutter, Android Studio

Databases: MS SQL Server, T-SQL, PostgreSQL (Supabase), Firebase Firestore

Cloud & Tools: Vercel, Railway, Firebase, Git, GitHub, Bitbucket, JIRA, Unity

Concepts & Methodologies: Object-Oriented Programming (OOP), SOLID Principles, Design Patterns, Unit Testing, Agile, Scrum

Other: MS Office, Facebook Business

LANGUAGES

English: Full Professional Proficiency (C1) | German: Elementary Proficiency (A2) | Turkish: Native

CERTIFICATIONS & AWARDS

- Google AI Fundamentals — Coursera (June 2026)
- Türkiye İş Bankası — ProSchool IT Class
- Tech İstanbul — Yeni Nesil Girişimcilik ve Kariyer (New Generation Entrepreneurship and Career)
- TopTalent.co — Best Place to Work Summit
- The Duke of Edinburgh's International Award — Bronze, Silver and Gold (community service, social responsibility, personal development)
